

PR005 Installation Guide

Installation

The bulkhead/screw mount GPS antenna is suitable for use with all Monit G-Series rally computers. The antenna has a screw thread that allows it to be secured in place through a mounting hole on the roof of the vehicle. The antenna has a seal that will prevent water entering the mounting hole.

During installation note that:

- The antenna should be mounted along the centerline of the vehicle and on top of the roof to allow a clear view of the sky.
- RF antennas should not be used near the GPS antenna.
- The dome of the antenna should be facing up towards the sky.
